Thanks Rattles for taking the trouble to preserve this information for other forum members. If you post copies of manuals or find manuals that have already been posted which other people may find helpful, please PM me the link or add a post to this thread. And the quick reference guide Maxie Methylated Spirit Stove I also have one branded "Carapark". Aladdin Kerosene Stove Cobber. I have been cleaning up our families old 1964 Harris caravan. Hasnt been out of the shed in 25 years but is in great condition. I will get some pics up here soon. My question is about a manual for the old electrolux fridge in the van. Are they around any help or pointing in a direction would be great Thanks Peter. On older model Electrolux instead of pushing a knob in to get gas flowing you pulled the knob out. Dometic Ignition Systems Piezo or Electronic ignitor All Dometic camping, caravan and free standing gas fridges come with either Piezo ignition or Electronic ignition. There is less to go wrong with Piezo ignitor as there are no electrics. Fridges with Piezo ignitors are cheaper than their Electronic ignition equivalents. Electronic Ignition Useful when using gas The Electronic ignition system is connected to a 12 volt supply. This is easier to light than the Piezo ignition system. If the gas pilot light goes out you will hear a clicking noise which means the electronic ignition is trying to relight the pilot light. Once the pilot light has lit the clicking noise will stop. 2 advantages with this system If the pilot light goes out, it will automatically relight. If the gas runs out, you will hear a clicking noise as it attempts to try to relight. Igniting a Dometic gas fridge Electronic Ignition Open gas cylinder or pressure regulating valve Turn on Electronic ignitor switch Turn gas control knob to the MAX position, press and hold down After ignition, hold down knob for a further 15 seconds before releasing. The neon light will stop flashing Piezo Ignition Open gas cylinder or pressure regulating valve Turn gas control knob to the MAX position, press and hold down After approximately 1015 seconds press Piezo knob several times until pilot light is lit After ignition, hold down knob for a further 15 seconds before releasing. Im going to get into heaps of trouble for this because its from the 1980s 1983 to be exact, shhhh! and Ill probably be sent to Coventry when Im in Cowra because of it. But my motives are pure because I figure that Electrolux may have been using some of the same mechanicals in their fridges in the 1980s as your 1960s fridge. and some people have an

RM210 in their vintage caravans as a replacement for an ice box.at least so Ive been told. So the instructions may be useful to others

too.http://www.croydon.com.br/images/uploads/image/bosch-powerstar-ae9_5-manual.xml

Electrolux RM210 12v240v LP gas refrigerator Hope thats of some assistance. If the print is too small to read, send me a PM and Ill email you an A4 size print. Don Ricardo Hi everyone, I had an Electrolux MB16b fridge in my Stirling caravan, made in England. Trouble is, I have no idea how to light it. It has a kerosene wick underneath it. I have spoken to previous owner who says it was checked by a gasfitter and works well. It has its own isolation gas switch. Can anyone help with the following 1 Do I light the wick itself with matches and then slide it in underneath along its rail. There is no Piezo ignition or other form of sparker. 2 Do I then leave the wick burning while the fridge is running 3 I would have no show of getting a replacement wick, so does anyone know how I would go about making a new wick, and with what material. The answers came from The old classicar.co.uk forum in the UK.which I reproduce, acknowledging the source but. Leave the temperature control inside the fridge at the 0 position. Dip the wick in Meths and light it, slide along the rail, or next to it it has been know to get stuck on the rail. Push and hold in the red push button at the base of the fridge. Once the jet as lit keep the red button pressed in for about 5 10 seconds. Remove the wick and extinguish it. Adjust the temperature control inside the fridge depending on how cold you want it probably 10 for your summers and 9 for your winters It took me a couple of attempts to light it, knowing where to hold the wick, its now first time everytime. To turn the fridge off use the isolator tap. I wouldnt know what to replace the wick material with. Do you have Tilley lights in Australia. You could always buy one of the preheating torches and use the material from that Cobber Mine is an LB 16b and doesnt have the red button mentioned in the English info but the wick on a sliding groove is there so sounds like a very similar model.

Cheers Its great to find details like this on this Forum. I know the Forum is very quiet compared to what it was a few years ago, but people doing what you have done generate a bit of life back into it. JBJ. Deutsch. AeecieeU. English. Espanol.
